PROFILE

CA Intermediate student with a focus on accounting fundamentals, financial logic, and building practical tools. I use AI to accelerate development but take ownership of understanding, reviewing, and validating everything I build. Interested in how financial systems work and making them more accessible.

EDUCATION

Chartered Accountancy (CA Intermediate) — Pursuing

Institute of Chartered Accountants of India (ICAI)

Studying advanced accounting, taxation, financial reporting, auditing principles, and business law.

WHAT I BUILD

FinFlow — Personal Finance Management Tool

A finance tool I built to solve a real problem — tracking money clearly without relying on complex apps.

- Income, expense, and budget tracking with offline support
- Receipt scanning via camera, bank PDF data extraction, and voice-based transaction entry
- Automated monthly financial reports with spending insights
- Smart expense categorization and budget alerts (green / yellow / red)
- Offline-first — syncs when back online
- Supports English, Bengali, and Hindi with Indian currency formatting

Built with AI assistance. Financial logic, review, and decisions — mine.

SKILLS

Financial & Analytical

- Interpreting financial data and identifying patterns

Tools

- Microsoft Excel / Google Sheets — formulas, pivot summaries, basic analysis

- Reviewing outputs for accuracy and consistency
- Structuring problems logically before solving them
- AI-assisted development – building functional tools with human review
- Currently learning: Python, SQL, PHP for data and automation use cases

Professional

- Clear written communication
- Documenting and reviewing processes
- Detail-oriented and careful approach to work

HOW I WORK

I treat AI as a tool, not a replacement for thinking. I focus on understanding problems first, reviewing outputs carefully, and building things that are correct and reliable. My goal is to develop strong financial knowledge and create tools that genuinely work.
